

# Gutshot

It is the weakest of all possible straight draws only having four outs to complete it. In rare case the outs can double to eight, making it equal to an open-ended straight-draw, when there are two possible inside straight-draws at the same time possible.

Example

Player has:  Flop is: 

The player requires a seven to complete the straight draw, having four outs if the other involved players have not been dealt a seven yet.

Player has:  Flop is: 

The player has a double gut-shot! The player can improve to a straight with a nine or a five, having eight outs instead of only four.

Notice how the [gutter](#) in the first example is to the [nuts](#), while the double-[gutter](#) in the second example is not as both straights are dominated by T9 to begin with, only able to split on hitting a nine, while losing to it on a five! It is important to always [check](#) if your [gutshot](#) is to the possible [nut](#) straight!
